

## Process Engineering, Process Management, Project Management and Environmental Management Solutions

Many things can affect the productivity of a wastewater or water treatment plant. Whether it be general wear with age, an increase in the throughput, or problems in the design or installation of the equipment, it can be challenging to solve the problem while maintaining the right output quantity and quality.

That's where Alpha Concepts come in. We are a team of dedicated and professional engineers with a proud history in designing, maintaining and troubleshooting water and wastewater treatment plants. Our breadth of skills and technical know-how gives us the leading edge when it comes to solving your treatment plant woes.

Some of the many consulting services we offer include:

- Plant servicing, including sampling, water analysis, mechanical checks, chemical supply and process checks
- Troubleshooting problem plants to get to the root cause of failure, and developing permanent solutions
- Improvement and augmentation projects to get better quality or higher throughput from your plant
- Ongoing performance monitoring
- Staff training, provision of training documents and operating procedures, and provision of technical drawings
- Third-party plant audits for development approval

For further information on our services and experience please visit us online at [www.alphaconcepts.com.au](http://www.alphaconcepts.com.au). Alternatively, check out our blog for regular updates on the progress of our consulting activities.
